Dr. Mona Parmar
CO-FOUNDER & CTO

The Team

Co-Founder & CTO
Dr. Mona Parmar

- Ph.D. in Climate Change & Agriculture with 10+ years of research and innovation experience.
- Expert in Controlled Environment Agriculture (CEA), climate-resilient agriculture, Integrated Aqua-Vegeticulture Systems (IAVS), and nutrient recycling.
- Leading the technology and R&D of Zyqua Greens' sustainable farming solutions.

Co-Founder & CEO
Mr. Anshuman Chaturvedi

- 10+ years of experience in sustainable agriculture, aquaponics, and greenhouse farming.
- Designed and developed a 2,000 sq. m. commercial IAVS greenhouse and consulted on multiple aquaponics projects.
- Leads business strategy, operations, and the commercialization of scalable climate-smart farming technologies.

The Problem

1

Core problem: Conventional chemical-intensive farming is quietly stripping India's food of real nutrition, so people are fed but not nourished.

2

Who suffers, and how do they cope today: Nutritionally vulnerable groups -- women of reproductive age, young children, and health-conscious households -- bear the brunt. Today they cope by leaning on synthetic supplements and iron/vitamin tablets, or simply eating more of the same soil & soilless-depleted produce, without anyone addressing the degraded farming system that caused the deficiency in the first place.

3

Why it matters: the cost of leaving it unsolved: Micronutrient failure compounds across generations — impaired cognitive development, lower productivity, and higher maternal and infant mortality — while the underlying cause (degraded soil, chemical dependency) keeps getting worse each season. No amount of supplementation can outrun a food system that's broken at the source.

KEY STAT

“ 53.7% of Indian women (age:15-49) suffer from anaemia - a direct marker of nutritional failure in the food system.”

Data source: FAO/IFAD/UNICEF/WFP/WHO, State of Food Security and Nutrition in the World (SOFI) 2025

The Solution

Freeze-Dried Microgreens (Powder & Whole-Stem & Leaves)

We freeze-dry nutrient-dense microgreens - grown through our Integrated Aqua-Vegeture System (iAVS), a sand based, closed-loop farming method - into powder and Whole-Stem & Leaves formats that lock in peak nutrition without chemical residues. Unlike conventional produce grown in degraded, fertilizer-dependent soil & soiless methods, iAVS-grown microgreens deliver verified micronutrient density because the growing system itself is engineered for it. Users get clean, potent nutrition they can trust down to the source, not just a product they hope is healthy.

- Benefit 1** – Real, verified nutrition — not just "organic" marketing, but microgreens grown in a system designed for micronutrient density from the ground up.
- Benefit 2** – Zero chemical fertilizers or pesticides — iAVS's closed-loop aquaculture-to-plant cycle removes the contamination risk conventional farming carries. (See Annexure 2: How iAVS works?)
- Benefit 3** – Convenience without compromise — freeze-drying preserves nutrients so powder or whole formats fit into any diet, any time, anywhere.

CURRENT STAGE: Product Ready

Product – How It Works

HOW IT WORKS

1

Step 1 Add to Your Daily Routine

Choose **Freeze-Dried Microgreens Powder** or **Freeze-Dried Microgreens Stems & Leaves**. Add one serving to smoothies, curd, salads, soups, or any everyday meal.

2

Step 2 Embrace Food-First Nutrition

Enjoy nutrient-dense microgreens every day while gradually **reducing dependence on synthetic nutritional supplements** through a convenient, whole-food alternative. Experience the quality and transparency of **Zyqua Greens'** sustainably grown microgreens.

3

Step 3 The Outcome

Build a healthier, more sustainable lifestyle with a simple daily nutrition habit - powered by clean-label Microgreens you can trust.

Clean Nutrition. Simplified.

STEP 1

Scoop & Sprinkle

Add to your favourite foods.

Choose Freeze-Dried Microgreens Powder or Stems & Leaves.

Add one serving to smoothies, curd, salads, soups, or any meal.

STEP 2

Nourish Naturally

Whole-food nutrition. Every day.

Get concentrated, whole-food nutrition in seconds while reducing reliance on synthetic supplements and experiencing the quality of sustainably grown Zyqua Greens microgreens.

STEP 3

Healthy Habit. Lasting Impact.

- ✓ Better daily nutrition
- ✓ A sustainable, food-first lifestyle
- ✓ Lasting trust in the Zyqua Greens brand microgreens.

SCOOP & SPRINKLE
Add to your favourite foods.

NOURISH NATURALLY
Whole-food nutrition. Every day.

HEALTHY HABIT.
LASTING IMPACT.

PERFECT FOR
EVERYDAY YOU

SMOOTHIES

CURD & YOGURT

SALADS

SOUPS

SANDWICHES

JUICES

PANEER & RICE

AND MORE...

Market Opportunity

TAM [₹ 20,146 Cr.]

Total market for this solution

SAM [₹ 7,655 Cr.]

The slice we can realistically reach

SOM [₹ 75 Cr.]

What you'll capture in 3-5 years

- TAM is based on India's Dietary Supplements Market (₹20,146 Cr, 2025 - IMARC), representing total consumer spend on solutions to nutrient deficiency.
- SAM narrows to the Vitamin & Mineral Supplements segment (₹7,655 Cr, 38% share, 2025 - IMARC).
- SOM reflects our realistic ₹75 Cr (~1 % of SAM) 3-5 year capture based on iAVS production capacity.

Note: We're not just a microgreens company - we're a nutrition-delivery company. Our market size reflects the problem we solve - nutrient deficiency - not the format we use to solve it.

Why now?

India's dietary supplements market is growing at 12.3% CAGR, yet it's built on synthetic tablets - and deficiency keeps rising anyway. That gap is pushing consumers and doctors to question synthetic fixes, opening real demand for whole-food, farming-verified alternatives. Government pushes toward chemical-free farming (PKVY, Natural Farming Mission) make clean-source claims a genuine edge — market and policy moving together, right now.

Our early adopters

- Pregnant women need bio-available iron and folate their doctors can trust.
- Neurodivergent children need consistent daily nutrition without sensory overload.
- Children who resist vegetables on taste and texture still need the nutrients inside them.
- Lactose-intolerant consumers need a clean plant-based calcium source dairy can't offer them.

Why We Have Chosen Microgreens for Nutrient Delivery

Microgreens are nature's most concentrated, bioavailable and sustainable source of plant nutrition, making them an ideal daily nutrient delivery format.

1 Nutrient Dense

Up to **4-40× higher concentrations** of vitamins, minerals and antioxidants than mature vegetables.*
Delivers more nutrition in a much smaller serving.

2 Highly Bioavailable

Harvested at the cotyledon/first true leaf stage when nutrients are highly concentrated. Freeze-drying preserves these nutrients while maintaining excellent absorption.

3 Convenient Daily Nutrition

12 g jar = approximately 171 g fresh microgreens.

One scoop daily replaces the need to consume large quantities of fresh greens. Easy to mix into smoothies, curd, soups and everyday meals.

4 Freeze-Drying Preserves Nutrition

Low-temperature drying helps retain vitamins, phytonutrients and antioxidants better than conventional heat drying. No preservatives or artificial additives required.

5 Sustainable Production

Grown in our **Integrated Aqua-Vegeticulture System (iAVS)** using: Up to **90% water recirculation**, No synthetic pesticides, Circular nutrient recycling

KEY STAT

Up to 40× Higher phytonutrients than mature vegetables*

171 gram Fresh microgreens concentrated into one **12 g** jar

7-14 Days Crop cycle enables year-round production

90% Water recirculation through iAVS

24 Months Shelf life without refrigeration

Direct Farm-to-Packaging Control	✓	✗	🟡 unverified	✗
Lab-Verified Clean Label (Zero Pesticides & Heavy Metals)	✓	🟡 (claim clean label)	🟡 (claim clean label)	✗

Indian Competitors = Oziva, Kapiva, Wellbeing Nutrition, True Elements
US Freeze-Dried microgreens Players = Be Micro, Revity Farms, 1st Leaf

OUR ADVANTAGE

We're the only company combining a Integrated Aqua-Vegeticulture system (iAVS) farming method with lab-verified, freeze-dried nutrition delivery - a category that doesn't exist in India today. This isn't easy to copy: iAVS represents years of founder-level agricultural science expertise built and refined through direct farm operation - not something a supplement brand can license or replicate by switching suppliers. Every batch is backed by our own lab-verified nutritional and safety data, building a proprietary quality dataset competitors don't have access to. And because we control the full farm-to-packaging chain ourselves, incumbents who rely on third-party sourcing would need to rebuild their entire supply chain from the ground up to compete - not just launch a new product line.

HOW iAVS WORKS?

At its simplest, a functioning iAVS consists of four essential physical components working together in a cycle.

1 THE FISH TANK

This holds the fish and acts as the primary water reservoir.

2 THE SAND BIOFILTER(S)

These are filled with carefully selected sand. They serve both as the growing area for your plants and as the system's natural filter.

Vegetable crops

Inlet (from pump)
at far end

Sand filter bed
with plastic lined bottom
(variable length)

3 THE WATER PUMP

Moves water from the fish tank to the sand biofilter(s).

4 THE TIMER

Controls when and for how long the water pump runs.

VEGETABLE PRODUCTION

50-150

kg/m²/year

iAVS SYSTEM

(UP TO 7-30x MORE YIELD)

FISH PRODUCTION

0.75 kg
per kg of feed
iAVS SYSTEM

(UP TO 2-4x MORE YIELD)

SPACE EFFICIENT

High productivity in a compact area.

WATER EFFICIENT

Recirculates up to 90% of water.

SUPERIOR ORGANIC

Naturally enriched with bio-nutrients.

NO PESTICIDES & CHEMICALS

100% chemical-free and safe produce.

LESS LABOURS

Automated system reduces manual work.

IAVS Greenhouse

Photographs from our Designed and operated Integrated Aqua-Vegeticulture System (iAVS) and Aquaponics demonstrating year-round cultivation of leafy greens, herbs, microgreens and fruiting vegetables. The images showcase crop production, water quality monitoring, harvesting, post-harvest handling and day-to-day farm operations, validating the technical feasibility and scalability of the iAVS model developed by Zyqua Greens.
